## Disclaimer

These pages are for informational use and historical purposes only. They are meant to recover and help you understand the research work done by Dr Raymond Royal Rife (May 16, 1888 – August 5, 1971) in the correct way, since a lot of fragmentary papers have appeared together with many wrong interpretations, and to date no exhaustive report exists.

This book is also meant as an answer to the book “The Cancer Cure That Worked: 50 Years of Suppression” by Barry Lynes (ISBN 0919951309), which tries to explain Rife’s work but fails to replicate the research work in its entirety, leaving many unanswered questions. His efforts contributed to the revival of Rife technology, but also reinforced its cataloging as quackery and pseudo-science, as his claims could not be verified and appeared largely exaggerated and unscientific<sup>1</sup>. As the title of Lyne’s book implies, Rife was experimenting with a cure against cancer that worked, in the '30s, but its details were lost, so that all the so called contemporary Rife machines do not work as expected, because they are not built on the same principles. Because of this, we titled our book “The Cancer Cure That Works”, since we disclose many things about the real Rife research that were hidden or lost and make replication viable. With the information contained in this book, Rife research can now work giving out the same results that he saw with his own eyes. We are not implying that Rife technology is effective against cancer: We are only releasing the overlooked lost details of a historical research that has a history of successes wrapped in mystery and

legend. With the correct information, researchers can now replicate and study real Rife machines, and conduct an appropriate scientific investigation and evaluation on “a supposedly working model”.

Patients and consumers who are willing to experiment with this technology should review the information carefully with their professional health care provider. The information is not intended to replace medical advice offered by physicians. The publisher, the author, and every person that contributed to the realization of this book make no representations or warranties with respect to any information offered or provided on or through the book regarding treatment, action, or application of medication, and they will not be liable for any direct, indirect, consequential, special, exemplary claim, loss or damage resulting from use of this book and/or any related content.

The opinions and conclusions expressed in this book are exclusively of the author, based on his research and intuition.

You should not use the information on this book for diagnosing or treating a medical or health condition. You should consult a physician in all matters relating to your health, and particularly in respect to any symptoms that may require diagnosis or medical attention. Any action on your part in response to the information provided in this book is at the reader’s discretion.

This book is intended as academic literature, i.e. an academic study of Rife’s work, and is specifically addressed to the academic field and teaching of Rife principles. To demonstrate theories and give proof of certain concepts, some images or video frames were taken/referenced from existing available literature, videos, etc. In case they are

copyrighted, we are required to declare that we intended only to make a “fair use” of them. Therefore, we are protected under Section 107 of the Copyright Act, which states: “*The fair use of a copyrighted work, including such use by reproduction in copies or phonorecords of by any other means specified by that section, for purposes such as criticism, comment, news reporting, teaching (including multiple copies for classroom use), scholarship, or research, is not an infringement of copyright*”.

The contents of the books are the fruits of the research conducted at the newly restored Rife Lab (<http://rifelab.euniversity.net>). The donations and the profits from the sales will be used to fund further research.

We tried to minimize the fair use of copyrighted material and relied to it only when it was instrumental to our research and therefore for the general benefit of the public.

Specifically, some images and occasional text have been taken from <http://www.rifevideos.com> (images are typically watermarked with “www.rifevideos.com”). At least one image has been taken from Novobiotronics inc. Some images and text have been taken from <http://w5jgv.com/rife/texas/texas.htm>. Some drawings, concepts, and technical tables have been taken from Kowalski’s “Ultraviolet Germicidal Irradiation Handbook - UVGI for Air and Surface Disinfection”, in particular when we deal with the topic of UV. We strongly advise the reader to buy this book, if he wants to learn everything about UV systems. Data and diagrams were taken from the NIST database. Other images and paragraphs were taken from miscellaneous technical papers, patents, commercial advertising, and available literature. The only purpose was to comment them technically, in order to explain Royal Rife’s research and works.

Due to the many years of research before publishing this book and the exceptional number of sources, it proved an impossible task to keep track of every image and quoted text. The author has done his best effort to credit the sources properly. Wherever either an image, a text, or a drawing has been quoted without proper recognition of its source, the author is committed to publish the proper credit on his website, when alerted by its owner.

## Permission To Read And Use The Content Of This Book

The content of this book should be the legacy of the entire humankind. Every attempt of a singular person or a group to remove this information from mankind or exploit it for their personal profit receives our prohibition to use it. This concept extends to any developments based on the concepts in this book.

In other words, this knowledge can only be either the legacy of humankind, or the legacy of nobody.

In particular, it is expressly forbidden to keep a copy of this book, read it, or use its content in any form in the following cases:

- The jurisdiction of the country forbids one or more of the considered equipment and/or practices
- The jurisdiction of the country reserves to a particular class of people (for example, the medical establishment) the practice of one or more of the analyzed equipment and/or practices
- There is an attempt to use the content of this book in a law court, by a lawyer, or in a law related context in order to charge somebody, limit his research, or question his freedom of will
- There is an attempt of monopolization or politicization

Any other use, or a forbidden use as said above, must have the written authorization of the author prior to such use.

General good and protection of classes as a pretext to use this book and related information in courts and suchlike

will not be tolerated, and treated as a political misbehavior.

Use of the research, concepts, ideas in this book to produce, manufacture, perfect, sell Rife devices/machines is strictly forbidden without the written consent of the author. Nobody is entitled to claim that a Rife device is manufactured adhering to its original principles expressed in this book unless certified by the author, or a certification body authorized by the author. If you continue reading this book, you agree to the statements above.

## Acknowledgments

I learned about Royal Raymond Rife in the '90s and it opened to me a whole new world of discoveries. Information started to come to me like wildfire from many different sources, until either by chance or coincidence I could learn the whole thing, which led me to an interesting experimentation.

I felt like “guided”, for I could talk to the right persons and find the right documents. It happened all in the proper sequence so that I could learn lesson by lesson. And then, some people who knew Rife’s secrets and are not publically associated with him have been willing to share them with me and even allow me to disclose my findings.

I should really thank many persons, but I will mention just the most important ones, who inspired my research.

A really great contributor to Rife’s world is James Bare<sup>2</sup>. I really enjoyed his work and he has been an inspiration for many inspirations. The second giant is Jeff Garff<sup>3</sup>, who decoded the Beam Ray in his report<sup>4</sup> and can be considered the heir of Rife’s papers, answering the question “what”. Other questions remained unanswered, such as the whys and hows, which will be taken into account in this book.

Among the other inspirers that are very respected in the community and strive for the truth, I have to thank the

English gentleman Aubrey Scoon<sup>5</sup>, unfortunately deceased, who did the first attempt to decode an original Beam Ray machine; Eric Rowley and Stanley Truman, who have been working on the drawings of Rife's Universal Microscope, rebuilt it, and even patented it; Peter Walker<sup>6</sup> from Germany, who runs the most authoritative Rife related lists; Bryan Rosner<sup>7</sup>, who is involved especially with the Lyme disease; Anthony Holland<sup>8</sup>, who is running extensive laboratory tests with a Rife/Bare plasma device. All these people made and make enormous efforts to bring back Rife's technology. Some of them think that they found the golden key, and some partly did. They might even know more than what they say, because some invested a lot in their research and need to have a return.

Last, I have to thank those who disclosed to me the whole thing, who asked not to be mentioned. Their knowledge dates back directly to Rife. Without their enlightening revelations, I would still swim in the dark waters, as everybody out there is.

## Preface

*Dedicated to my son, Elia Manu Del Tin:*

*“Elia, never stop to that which the others want you to believe, search to the end and you will find the ultimate truth”.*

I started to write this book with the goal to make a standard reference text for Rife researchers, where it is possible to find every detail of Rife work, whether it was already made public or not. As time was passing and the documentation becoming too big for a single book, I decided to make this work just a big introduction to Rife technology, reserving the deepening of specific aspects (such as the calibration of the Beam Ray, the Microscope, the building of the MOR lists, etc.) to future treatises.

Here, you will find the complete explanation of the “thing”, as Rife used to call it, referring to the Beam Ray instrument that was used to devitalize living microorganisms.

It will be my concern to report exactly that which was in Rife’s mind, how he performed his experiments, why he chose certain technologies, and what he was working on. I will do this bringing scientific evidence of each single phenomenon and also taking into account modern post-Rife developments that are not known to the general public.

What this book is not about is giving a cancer cure out of the box, or ready schematics that anyone can build to have a real Rife machine. As the reader will learn, there are much more parameters to take into account to get the “thing” working than it is usually believed. However, I will give the general mathematical formulas and part details that will enable a skilled researcher to build working

prototypes as they are intended to be.

This book is also not about Rife's history, of the history of his devices, for there is already a lot of information around. I assume that the reader is already familiar with the subject. Therefore, this book will be a technical reference for researchers, rather than a primer on Rife work. I will start from where the existing general knowledge of the matter stops.

If you are not already acquainted with the subject and need a good introduction, I suggest you read the following primers in order:

- 1) "Bioelectromagnetic Healing: A Rationale For Its Use" by Thomas Valone, ISBN 09641070-5-8
- 2) The Rife Handbook Of Frequency Therapy With A Holistic Health Primer by Nenah Sylver, ISBN 97809818075-0-8<sup>9</sup>
- 3) The Rife Way III by Mark Simpson, ASIN B0006QIG7M<sup>10</sup>
- 4) "The Cancer Cure That Worked: 50 Years of Suppression" by Barry Lynes, ISBN 0919951309
- 5) "Resonance: The Continuation Of Studies Of Rife Technology & Beam Ray" by Alex Duarte, ISBN 09762346-0-0
- 6) "The Rife Machine Report: A History of Rife's Instruments And Frequencies" by Jeff Garff<sup>11</sup>

---

<sup>9</sup> <http://nenahsylver.com/>

<sup>10</sup> <http://www.pulsedtech.ro/>

<sup>11</sup> [http://www.rifevideos.com/the\\_rife\\_machine\\_report.html](http://www.rifevideos.com/the_rife_machine_report.html)

---

All these books will give you a general introduction. You will find many bits of information, sometimes contrasting. Some authors had indeed some results. However, as you will learn, none of them has the complete truth as Rife perceived it. The closest reconstruction was made by Jeff Garff in his “The Rife Machine Report: A History of Rife’s Instruments And Frequencies”, which I will take as the starting point in many explanations. So, I advise you read it thoroughly. There are some conclusions that I deem wrong, but we will see this in detail. The good is that, after so many people working and trying to revive Rife technology, the community is so close to it that we just need to complete the puzzle. I would say now that, had I not even met the people who put me on the right track, just by reading carefully all the public documents that became available one could reach the truth: It has always been there straight in front of our eyes. Unfortunately, everybody wants to give his own interpretation, which is filtered through his own culture and knowledge. And this led to certain historical errors that had an impact on the whole community. Fortunately, it came the time to straighten the things out.

The book is divided into five parts. Part 1 narrates briefly the story of somebody who preserved and further developed Rife technology, which is not known by the mainstream.

Part 2 explains some fundamental concepts in order to understand better Rife’s work. Part 3 analyses the existing documentation, clarifying the most obscure points and explaining throughout the principles of the Rife Ray.

Part 4 leaves the historical debate to focus exclusively on building new working models, both with the original technology that Rife used and with modern components.

Part 5 illustrates common lab protocols.

Finally, as the research developed, many good working models emerged, which are not necessarily Rife's, but which are still based on his principles. Therefore, we found useful to expand on them also, even if this might seem to add some confusion. At the end, Rife himself considered his study as very preliminary and recommended everybody to do his own work, and this is exactly what we have been doing.

It is the author's wish that, thorough this publication, clarity is made once an forever on Rife's research, contributing to remove his name from pseudo-science and quackery and retribute him to the place he belongs to: Science.
