Nourish by Nature

Imagine a way to experience water as though drinking from a mountain stream. Water that benefits your body, increases your vitality, and improves your garden and house plants, all while benefiting the environment.

The Vortex Water Revitalizer is the solution to many of our current water problems. By treating water naturally and allowing it to move within its natural flow dynamic, your tap water transforms into healthy, living water, full of vitality. Your body, health, home and the environment will greatly benefit.

Be Nourished by Nature with the Vortex Water Revitalizer's natural, life giving water.

The Problem: Today's Water Situation

The water being pumped through our cities and towns is over processed and full of harmful chemicals; it is denatured and de-structured. Our water is put through many processes, which treat water in unnatural ways. It is pumped through miles of straight and narrow pipelines with numerous 90-degree turns, and frequently exposed to unnatural, high-pressure turbine pumps. This causes the water to become defenseless against bacteria and viruses, it loses its natural ability to self-clean, and it loses its vitality.

As a result of bacteria build up, chlorine is added to the water at multiple stations throughout our cities and towns. This kills both the good and bad bacteria. Numerous studies have shown that chlorine is harmful to us when we drink it and shower in it. Callum Coats states, in his book *Living Energies*, "Present methods of water treatment kill water, [which] ultimately destroys those organisms constantly forced to drink it. We therefore actually sterilize our blood when we drink chlorinated water, thereby readying ourselves for the onset of disease."

Apart from this unnatural treatment of water, there are a number of other water issues that we face today, including:

- Hard water
- pH imbalance
- Nitrates
- Odors
- Mineral build-up
- Bacteria
- Pesticide run-off
- Chlorine
- Discoloration

Did You Know?

In 37% of us, the thirst mechanism is so weak that it is often mistaken for hunger.

The fast growth of the human population and the vast expansion of urban development has caused severe damage to the environment. Because of centuries of treating water unnaturally in urban and rural areas, we are left with lifeless water. By continuing to treat water the way we do we are not only left with poor quality water for personal consumption, but we are also causing severe damage to our rivers, lakes and oceans, and their surrounding ecosystems.

Filters and other water treatment systems are often purchased to try and clean water, in order to make it more drinkable and less harmful to one's body. Even when filtered, distilled, or processed by reverse osmosis, water is cleaned, but the water is still stale and lacking in vitality. Most water treatment systems actually strip water of many important minerals and natural properties, leaving it flat and lifeless.

“Water is itself a living entity and should be treated as such.”

- Callum Coats

Natural Laws

The Vortex Water Revitalizer was designed with natural laws in mind; it simulates the natural movement of water, like that of a river or stream.

By bringing nature into our homes and businesses with this new concept in water treatment, we are able to reverse today's unnatural, destructive treatment of water and instill it with its natural health, structure and vitality.

Not only is Revitalized Water significantly improved for personal use, for our health and our homes; but also we are able to begin reversing the damage that has been caused to the environment.

The Solution: The Vortex Water Revitalizer

As water flows through the Vortex Water Revitalizer's internal double spiral flow form, it is transformed. The flow form creates a powerful vortexing action in the water. This vortexing movement is found throughout nature in rivers, streams and oceans; it is always the natural path of least resistance, that free-flowing water takes in order to keep itself healthy and full of vitality.

This vortexing action causes implosion in the water. Implosion is a life forming action, the opposite of explosion, which is a destructive action. Implosion does a number of things to positively treat the water:

1. Restores the water's natural health, structure and vitality.
2. Micro-clusters the water molecules.
3. Increases and activates dissolved oxygen in the water (towards its natural level).

Micro-clustered Water

The structure of water is made up of large clusters of water molecules. As a result of implosion, these clusters are dispersed into much smaller groups of water molecules, known as micro-clusters. Micro-clustered water allows for instant absorption, resulting in superior hydration. It also aids in the separation of toxins and heavy gases from the hold of the water, such as chlorine. After being treated by the Vortex Water Revitalizer, chlorine will naturally evaporate from the water when released from a tap.

Increased & Activated Dissolved Oxygen

As a result of implosion, dissolved oxygen is activated and often increased in the water. The activation of dissolved oxygen aggressively interacts with pollutants and creates an inhospitable environment for anaerobic bacteria (bad bacteria), like E.coli. Anaerobic bacteria thrive in oxygen free environments.

In contrast, the increased and activated dissolved oxygen in the water creates a more hospitable environment for aerobic bacteria (good bacteria). Aerobic bacteria aids in the delivery of nutrients to plants, the decomposing of wasters and the break down of sewage.

The Vortex Water Revitalizer causes stale, denatured tap water to be brought back to its natural health, structure and vitality. As a result of this natural treatment of water, it's self-cleaning, antibacterial abilities are restored, it is brought to a natural pH balance and it is naturally softened.

Did You Know?

An additional 2% of water in the body can trigger fuzzy short term memory, and helps with basic math trouble & difficulty focusing on a computer.

A photograph of a forest stream flowing over moss-covered rocks. The water is clear and white, cascading over several large, rounded boulders. The surrounding forest is dense with green foliage and trees. The scene is captured in a soft, natural light, emphasizing the vibrant green of the moss and leaves.

“Trees synthesize water. Hence, no forest, no water.”

- Viktor Schaubberger

The Vortex Water Revitalizer was inspired by the work of Austrian forester, philosopher, inventor and naturalist, Viktor Schaubberger.

Vortex Water Revitalizers are offered in a variety of sizes and designs to suite any application. The River of Life Vortex Water Revitalizers and the Standard Vortex Water Revitalizers are available for whole house installations. There are also Vortex Water Revitalizers designed to fit directly to a kitchen faucet, shower or to connect to other water treatment systems.

Commercial sizes are available for large houses, agriculture, industrial and municipal applications.

Benefits

The following are just some of the many benefits you will experience from using the Vortex Water Revitalizer:

Body

Levels of chlorine are dramatically reduced or eliminated in Revitalized Water, along with its harmful effects. The revitalizing process also naturally softens the water making it an absolute pleasure to shower in. Dryness and irritation of the skin will be reduced or eliminated, leaving skin feeling cleaner, softer and renewed. Your hair will be rehydrated making it healthier, softer and shinier than ever before, even issues with dandruff can be solved. You will also use less soaps, shampoos and conditioners because of improved water quality.

Did You Know?

Your skin absorbs the same amount of chlorine in one shower as you do when drinking eight glasses of regular tap water. Showering in Revitalized Water is just as important as drinking it.

Health

Revitalized Water tastes and feels amazing, making your drinking experience much more enjoyable. Due to the micro-clustered water molecules, Revitalized Water is instantly absorbed by your body, unlike most water, which will sit heavily in your stomach after drinking and even slosh around. Your cells will be able to absorb nutrients more efficiently. Similarly, toxins and bodily waste will be more effectively excreted from your cells. This quick and efficient absorption of water by your body leads to better hydration, alertness and increased energy.

Benefits

Home

When cleaning the house, whether it be laundry, dishes or surfaces, you will see better results using less soaps, detergents and harsh cleaners. Scale, mineral build-up or rust deposits on appliances, toilets, coffee pots and plumbing will be dramatically reduced or eliminated. These issues are usually the result of hard water, and Revitalized Water is naturally softened.

Bacteria in your water, appliances, fixtures, or in your pipes will be reduced or eliminated because Revitalized Water's natural antibacterial properties are restored.

Revitalized Water is also brought to a natural pH balance, usually falling between 6.8pH and 7.2pH (like that of a mountain spring). The ideal pH level of water is 7.0.

In your garden and houseplants, you will see a complete transformation. A more hospitable environment for aerobic bacteria helps with the absorption of nutrients by your plants, improving their health. The soil will become more capable of holding its humidity; you will use 20%-50% less water for irrigation, saving you money and benefiting the environment. The quality and quantity of your plants will also significantly increase.

Did You Know?

Plastic water bottles are one of the largest contributors to the polluting of our beaches and oceans.

The Environment

Increased levels of dissolved oxygen in the water help aerobic bacteria to better break down septic sewage as it leaves your home, causing it to be less detrimental to the environment. Revitalized Water also stays Revitalized, which means that when it leaves your home it is positively affecting surrounding wastewater in the sewage system.

The ability to get naturally treated water directly from your tap will also bring an end to the need for plastic water bottles.

These factors will greatly benefit our rivers, lakes, oceans and their surrounding ecosystems.
